

16th International Conference of Asia Institute of Urban Environment

AIUE 2019 MATSUSHIMA

Sustainable Urban Design in Asia City II

November 8th-10th 2019

Matsushima, Japan

Theme

With a rapid urbanization in Asia, the importance of understanding the relationship between the changing urban environment and the quality of life within the city is being increasingly recognized. The experience of developed cities shows that most cities have been coping with phenomena such as rural-urban migration, expansive urban sprawl with massive consequences for the sustainability of the city and its community resulting in land area problems within the rural-urban fringe among the most common ones. We expect to deepen discussions among foreign researchers on the scheme of preservation of the urban environment and sustainability, as well as challenging a strategy of the urban environment in order to realize sustainable cities wherein we can continue to live within our sustainable communities.

November 8th

Pre-Conference Tour

- Visit to Areas affected by the Great East Japan Earthquake (Start at Sendai Station)
- Registration Open

November 9th
